Assume a company's January 1, 20X1, financial position was: Assets, \$40,000 and Liabilities, \$15,000. During January 20X1, the company completed the following transactions: (a) paid on a note payable, \$4,000 (no interest); (b) collected trade receivables, \$4,000; (c) paid trade payables, \$2,000; and (d) purchased a truck, \$1,000 cash, and \$8,000 notes payable. What is the company's January 31, 20X1 financial position?

	Assets	Liabilities	Shareholders' Equity
A)	\$42,000	\$9,000	\$33,000
B)	\$44,000	\$17,000	\$27,000
C)	\$43,000	\$18,000	\$25,000

Why is the continuity assumption so important for statement of financial position reporting?

The continuity assumption is also known as the going-concern assumption. It is important for statement of financial position reporting because of valuation issues. If a business is expected to operate into the foreseeable future, amounts presented on the statement of financial position for assets and liabilities are based on the cost principle. If the continuity assumption is not followed, assets and liabilities might be reported at liquidation values as if they are going out of business.

Why is the separate-entity assumption so important for statement of financial position reporting?

The separate-entity assumption is important for statement of financial position reporting because a business should present only its own assets and liabilities on the statement. A business is a separate accounting entity from its owners. Therefore, the owners' assets and liabilities would appear on their own (personal) financial statement.

Why is the historical cost principle so important for statement of financial position reporting?

The cost principle is important for statement of financial position reporting because of valuation issues. The cash-equivalent cost is verifiable. If it were not for the cost principle, assets and liabilities could be reported at more subjective values. This could lead to manipulation of statement of financial position amounts.

In what two places do amounts for transactions appear in the accounting system or "the books"? Describe them.

Transactions are first recorded in the journal. This is known as the book of original entry. Transactions are entered chronologically in a debit-credit format. After transactions are journalized, the amounts are posted to the ledger (the book of final entry). The ledger contains accounts for each financial statement element so that balances can be determined.
